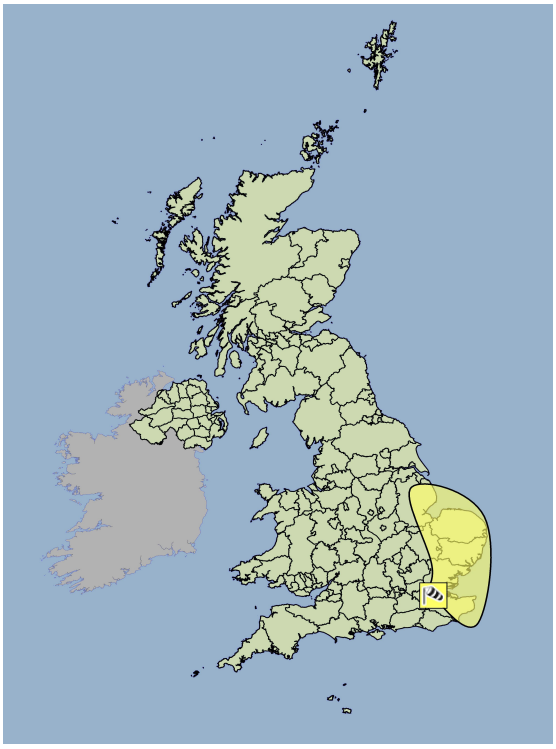
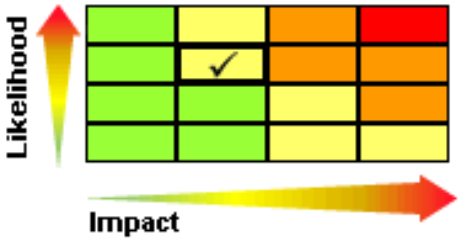
National Severe Weather Warning Service





Chief Forecasters Assessment
The strong cold north to northwesterly flow has become confined to southeastern areas and will progressively weaken as the low pressure over the southern North Sea earlier today moves away southeastwards.

The Met Office have issued a **Yellow Warning** of **Wind**

Valid from **11:40 on Sat, 21st Nov 2015** until **16:00 on Sat, 21st Nov 2015**

A swathe of gale force north to northwesterly winds will continue to affect parts of eastern England into this afternoon giving gusts of 40-50 mph inland and locally 60-65 mph on exposed coasts. The strongest of the winds should steadily ease from the north and become confined to the extreme southeast by mid afternoon. Scattered wintry showers are also likely.

Please be aware of the likelihood of some difficult driving conditions and possible travel disruption due to gusty winds.

This is an update to the earlier warning to confine the area at risk of very strong winds to southeastern Britain and to remove the emphasis on snow.
